Preliminary #WeCount findings

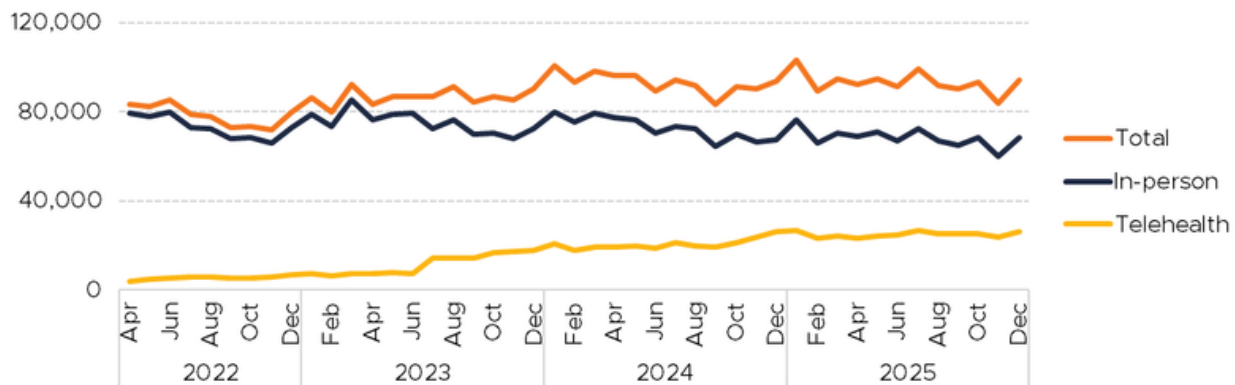

Data from April 2022–December 2025

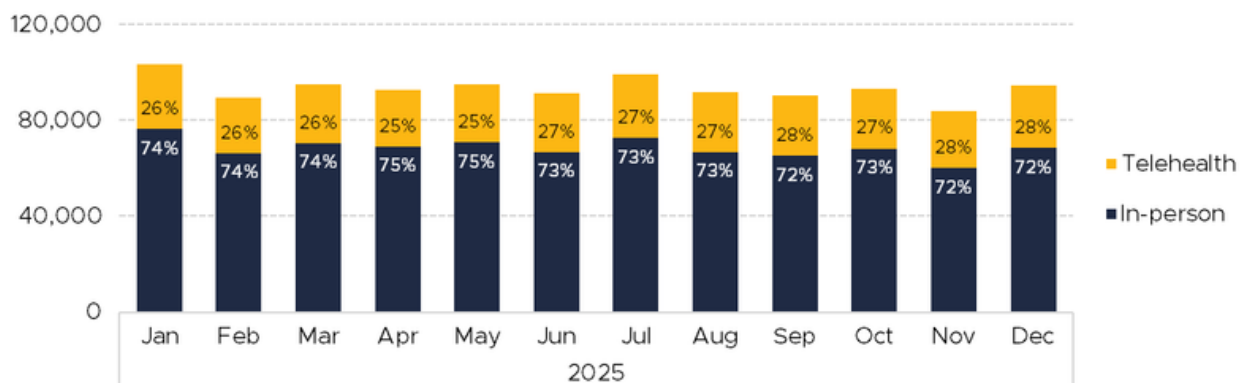

[#WeCount](#) is a national research effort that measures monthly counts of clinician-provided abortions. Final 2025 estimates will be released in June 2026.

National findings

Since 2022, telehealth has made up a growing share of clinician-provided abortions in the US. In 2025 there were over **1.1 million** clinician-provided abortions. Of these, nearly 300,000 were provided via telehealth.

An estimated **28% of abortions were provided via telehealth** in December 2025.

Variation by policy environment

- **Where telehealth abortion is permitted**, telehealth accounted for up to 40% of abortions in 2025, with the highest proportions in Ohio, Hawaii, Nevada, and Delaware.
- **Shield laws facilitate abortion access in states with total bans, where in-person care is nearly non-existent.** In 2025, telehealth accounted for 97%–100% of abortions in states with total abortion bans.
